

Apache2T R I A D.net

Apache2triad is a distribution of some of the most popular open source servers and interpreters for developing and providing web content using windows
I am a system/software engineer from Romania and this project was initially developed to free me from having to configure these things over and over again for each new workstation or on each os reinstall, if you are interested on my freelance services see [vladalexa.com](#).

Below is a list of logos and links to the most significant open source software projects contained within apache2triad
Apache2Triad is licensed under the GNU GPL licence like most of the software bundled within it so you are free to use it any ways you want.

Servers

Apache

mod_python

mod_ssl

mod_perl

OpenSSL 0.9.7e with SSL.Cert

AWStats

MySQL with MyODBC , winMySQLadmin

PHPmyadmin
